

PRD: Implement Hybrid Doctrine Architecture for Magnifica Humanitas

Conclusion / Summary

The current site preserves the encyclical beautifully, but the operational UX layer has not been implemented yet.

The coding agent should now implement the **Hybrid spine**:

- Keep the ceremonial encyclical chapters intact
- Add orientation tools near the Table of Contents
- Add application tools before the Conclusion
- Update navigation so users can move between Cover, Doctrine, Chapters, Apply, Export, and Conclusion

The goal is to transform the site from a beautiful document into a usable **AI governance doctrine engine** without making it feel like SaaS.

Traditional Approach:

1. Current State

Live page currently follows this structure:

1. Cover / Hero
2. Incipit
3. Index Rerum / Contents
4. Introduction
5. Chapter I
6. Chapter II
7. Chapter III
8. Chapter IV
9. Chapter V
10. Conclusion

This structure is visually strong, but it is still mostly passive.

The following requested sections are currently missing or not visible as standalone operational sections:

- Executive Summary
- Reading Modes
- Reader Paths

- Standalone Five Principles cards
 - Doctrine Map
 - Apply the Doctrine block
 - Governance Gates
 - Five Red Lines
 - Person Test
 - Export the Doctrine
 - Updated navigation anchors
-

2. Product Goal

Implement the **Hybrid information architecture**.

The site should preserve the sacred / ceremonial flow of the encyclical while adding practical governance sections that help users:

- Understand the doctrine quickly
 - Navigate by role or intent
 - Extract the moral framework
 - Apply the doctrine to AI systems
 - Copy/export governance artifacts
 - Move from theological argument to operational judgment
-

3. Required Final Page Order

Implement this exact page order:

1. Cover / Hero
2. Incipit
3. Executive Summary
4. Reading Modes
5. Reader Paths
6. Index Rerum / Contents
7. Five Principles for the Digital Age
8. Doctrine Map
9. Introduction
10. Chapter I
11. Chapter II
12. Chapter III
13. Chapter IV
14. Chapter V
15. Apply the Doctrine

- Governance Gates
- Five Red Lines
- The Person Test
- Export the Doctrine

16. Conclusion

17. Footer

Important:

Do not interleave every operational section between chapters.

Do not break the ceremonial chapter spine.

Do not remove existing encyclical content.

4. Navigation Requirements

Left Sidebar Navigation

Current sidebar includes:

- Introduction
- I
- II
- III
- IV
- V
- Conclusion

Update it to include the new operational sections while keeping the elegant minimal structure.

Recommended sidebar:

```
—  
Doctrine  
Apply  
  
Introduction  
I  
II  
III  
IV  
V  
Conclusion
```

Alternative sidebar if space is tight:

```
–  
Doctrine  
Apply  
Export  
  
Intro  
I  
II  
III  
IV  
V  
End
```

Dropdown Navigation

Current dropdown only includes:

- Cover
- Introduction
- I
- II
- III
- IV
- V
- Conclusion

Update dropdown options to include:

```
<option value="#top">Cover</option>  
<option value="#executive-summary">Summary</option>  
<option value="#reading-modes">Reading Modes</option>  
<option value="#reader-paths">Reader Paths</option>  
<option value="#principles">Doctrine</option>  
<option value="#doctrine-map">Doctrine Map</option>  
<option value="#introitus">Introduction</option>  
<option value="#cap1">I · Faithful to the Gospel</option>  
<option value="#cap2">II · Foundations</option>  
<option value="#cap3">III · Technology</option>  
<option value="#cap4">IV · Truth, Work, Freedom</option>  
<option value="#cap5">V · Civilization of Love</option>  
<option value="#apply-doctrine">Apply the Doctrine</option>
```

```
<option value="#export-doctrine">Export</option>
<option value="#conclusio">Conclusion</option>
```

Acceptance Criteria

- All sidebar links work
 - Dropdown links work
 - New sections have stable anchor IDs
 - No broken scroll behavior
 - Existing chapter anchors remain unchanged
-

5. Feature 1 — Executive Summary

Anchor ID

#executive-summary

Placement

After Incipit and before Reading Modes.

Required Copy

Title:

A Doctrine for Judging Machines by What They Do to the Human Person

Body:

Magnifica Humanitas argues that artificial intelligence must be judged by whether it protects or diminishes the human person. Its central claim is simple: human dignity cannot be earned, measured, optimized, automated, or delegated away.

Closing line:

The machine may calculate. It may not absolve.

UI Direction

This should feel like a doctrinal preface, not a product hero.

Use:

- Ceremonial spacing
- Thin gold rule
- Editorial typography
- Blue / cream / muted gold palette
- No bright SaaS cards

Acceptance Criteria

- Appears near the top of the page
 - Clearly explains the thesis
 - Does not visually disrupt the existing design
-

6. Feature 2 — Reading Modes

Anchor ID

#reading-modes

Placement

After Executive Summary.

Modes

Read the Encyclical

Description:

Move through the full ceremonial text from Introduction to Conclusion.

Target:

#introitus

Extract the Doctrine

Description:

Study the principles, doctrine map, and moral architecture.

Target:

#principles

Apply the Doctrine

Description:

Use the governance gates, red lines, person test, and exports.

Target:

#apply-doctrine

UI Direction

Use three horizontal cards on desktop and stacked cards on mobile.

They should look like solemn reader pathways, not app tabs.

Acceptance Criteria

- All three modes are clickable
 - Smooth scroll works if already supported
 - Layout works on mobile
-

7. Feature 3 — Reader Paths

Anchor ID

#reader-paths

Placement

After Reading Modes and before Index Rerum.

Required Paths

For Builders

Prompt:

How should I design AI without degrading human agency?

Target:

#governance-gates

For Policymakers

Prompt:

What must be regulated?

Target:

#red-lines

For Workers

Prompt:

What protections does dignity require?

Target:

#cap4

For Theologians

Prompt:

How does Catholic Social Doctrine extend into AI?

Target:

#cap2

For Investors

Prompt:

Which AI companies build toward Jerusalem, not Babel?

Target:

#doctrine-map

UI Direction

Use compact cards or small linked panels.

Each path should include:

- Audience label
- One guiding question
- Anchor link

Acceptance Criteria

- Reader can self-select a path
 - Links jump to correct sections
 - Section does not clutter the opening experience
-

8. Feature 4 — Standalone Five Principles for the Digital Age

Anchor ID

#principles

Placement

Immediately after Index Rerum / Contents and before Doctrine Map.

The site already contains this material in Chapter II. Do not remove the Chapter II version. This new section should function as an extracted operational layer.

Required Intro

Title:

Five Principles for the Digital Age

Subtitle:

The doctrinal foundation translated into governance questions.

Principle Card Format

Each card must include:

- Doctrine
- AI Translation

- Governance Question
- Red Flag

Cards

1. The Common Good

Doctrine:

Not the mere sum of interests, but a “plus” born of interdependence.

AI Translation:

AI systems must be judged by their effects on shared life, public trust, access, and institutional power.

Governance Question:

Who benefits, who pays the cost, and who is excluded?

Red Flag:

A system concentrates power while distributing harm.

2. Universal Destination of Goods

Doctrine:

The goods of the earth belong to all — including patents, algorithms, platforms, infrastructure, and data.

AI Translation:

Data and digital infrastructure must not become private empires when they shape public life.

Governance Question:

Is this system enclosing a shared good?

Red Flag:

Public data is harvested into private control without return, remedy, or accountability.

3. Subsidiarity

Doctrine:

Higher powers must not supplant lower communities.

AI Translation:

AI must preserve local agency, human appeal, and community-level override.

Governance Question:

Who can contest or override the system?

Red Flag:

A centralized model imposes decisions with no meaningful appeal.

4. Solidarity

Doctrine:

Networks create nearness, but solidarity is the conscious choice to bear one another.

AI Translation:

AI should not exploit invisible labor, vulnerable users, or distant communities.

Governance Question:

Whose labor, data, attention, or environment makes this system possible?

Red Flag:

The system hides the people who pay its real cost.

5. Social Justice

Doctrine:

Place the person, not wealth or data accumulation, at the center.

AI Translation:

AI must not create new exclusions through surveillance, opacity, scoring, or automation.

Governance Question:

Does this system make the vulnerable more vulnerable?

Red Flag:

The system quietly punishes people who cannot be easily measured.

UI Direction

Cards should feel like doctrinal tablets.

Avoid:

- Neon
- Bright gradients
- Startup dashboard styling
- Generic Bootstrap card look

Use:

- Thin borders
- Muted gold accents
- Cream text
- Editorial spacing
- Roman numerals or small ecclesial markers

Acceptance Criteria

- Five cards render cleanly
- Cards are readable on mobile
- The section feels extracted from the encyclical, not bolted on

9. Feature 5 — Doctrine Map

Anchor ID

#doctrine-map

Placement

After Five Principles and before Introduction.

Required Copy

Title:

Doctrine Map

Subtitle:

From theological foundation to AI governance action.

Map Columns

Foundation

- Human dignity
- Common good
- Subsidiarity
- Solidarity
- Social justice

Threats

- Technocratic paradigm
- AI mystification
- Data enclosure
- Digital colonialism
- Automated war
- Synthetic falsehood

Protected Goods

- Truth
- Work
- Freedom
- Human weakness
- Peace
- Communion

Required Actions

- Transparent algorithms
- Worker protection

- Human oversight
- Data stewardship
- Digital sobriety
- Multilateral governance

UI Direction

Use a four-column map on desktop.

Responsive behavior:

- Desktop: 4 columns
- Tablet: 2 columns
- Mobile: 1 column

Acceptance Criteria

- User can understand the encyclical's structure at a glance
 - Map links or visually relates foundations → threats → protected goods → actions
 - Layout does not break on mobile
-

10. Feature 6 — Apply the Doctrine Block

Anchor ID

#apply-doctrine

Placement

After Chapter V and before Conclusion.

Required Intro

Title:

Apply the Doctrine

Subtitle:

The encyclical becomes practical when it judges systems, institutions, and incentives.

This block includes:

1. Governance Gates
 2. Five Red Lines
 3. The Person Test
 4. Export the Doctrine
-

11. Feature 7 — Governance Gates

Anchor ID

#governance-gates

Placement

Inside Apply the Doctrine block.

Required Intro

Title:

Governance Gates

Subtitle:

No AI system should pass without answering these questions.

Gates

Gate I — Human Dignity

Question:

Does the system reduce a person to a score, prediction, risk category, productivity measure, or behavioral value?

Pass:

The system preserves human dignity regardless of efficiency, productivity, disability, age, poverty, vulnerability, or predicted value.

Fail:

The system treats people primarily as costs, risks, resources, attention targets, or optimization variables.

Gate II — Common Good

Question:

Does the system serve shared life, or does it enclose power?

Pass:

Benefits and burdens are identified, distributed, and governed with public-interest safeguards.

Fail:

The system extracts value from many while concentrating control in a few.

Gate III — Subsidiarity

Question:

Can affected people contest, appeal, override, or meaningfully influence the system?

Pass:

The system includes appeal paths, human review, stakeholder input, and local/contextual override.

Fail:

Decisions are imposed by centralized technical, corporate, or state actors without redress.

Gate IV — Truth

Question:

Does the system blur truth and falsehood, or does it disclose uncertainty and provenance?

Pass:

Synthetic content, uncertainty, sources, recommendation logic, and limits are clearly disclosed.

Fail:

The system presents opaque, manipulative, unverifiable, or synthetic output as trustworthy truth.

Gate V — Accountability

Question:

Can a harmed person identify who is responsible?

Pass:

There is a named human owner, audit trail, escalation path, appeal process, and final human authority.

Fail:

Responsibility is hidden behind the model, vendor, automation layer, or “the machine.”

UI Direction

Governance Gates should feel judicial.

Recommended structure:

- Gate title
- Question
- Pass condition
- Fail condition

Use expandable panels only if the page becomes too long. Otherwise, stacked panels are acceptable.

Acceptance Criteria

- All five gates visible
- Gates are usable as a practical review checklist
- Mobile layout is clear
- No copy is truncated

12. Feature 8 — Five Red Lines

Anchor ID

#red-lines

Placement

After Governance Gates.

Required Copy

Title:

Five Red Lines

Subtitle:

What the doctrine refuses.

Red lines:

1. **No human being may be reduced to a score of worth.**
2. **No high-stakes decision may hide responsibility behind a model.**
3. **No private platform may quietly govern public truth without scrutiny.**
4. **No automation may sacrifice workers without protection and retraining.**
5. **No machine may simulate moral agency where conscience is required.**

UI Direction

This should feel like a solemn prohibition list.

Use:

- Roman numerals
- Larger type
- Strong spacing
- Subtle gold rule or border

Avoid loud red styling unless already part of the design system.

Acceptance Criteria

- Red lines are immediately scannable
 - Section has visual authority
 - It feels doctrinal, not marketing-like
-

13. Feature 9 — The Person Test

Anchor ID

#person-test

Placement

After Five Red Lines and before Export the Doctrine.

Required Copy

Title:

The Person Test

Subtitle:

Before every system, ask who becomes more human — and who becomes easier to discard.

Questions:

- Who becomes more visible to power?
- Who becomes less able to appeal?
- Who carries the cost of efficiency?
- Who is treated as data before being treated as human?
- Who can stop the machine?

Closing Litany:

Before every system, there is a person. Before every dataset, there is a life. Before every optimization, there is a sacrifice.

UI Direction

This section should feel contemplative and human.

Use:

- Centered layout or narrow text column
- Large readable questions
- Litany-like rhythm
- More breathing room than the cards

Acceptance Criteria

- Section is emotionally legible
 - Questions are easy to quote
 - Closing litany has visual emphasis
-

14. Feature 10 — Export the Doctrine

Anchor ID

#export-doctrine

Placement

After Person Test and before Conclusion.

Required Intro

Title:

Export the Doctrine

Subtitle:

Use Magnifica Humanitas as an AI governance skill, audit checklist, or agent instruction set.

Export Cards

SKILL.md

Description:

A governance / ethics agent skill using the five principles and verification gates.

Button:

Copy SKILL.md

principles.yaml

Description:

Structured principles: dignity, common good, subsidiarity, truth, and accountable human control.

Button:

Copy principles.yaml

audit_gates.yaml

Description:

Verification gates for reviewing high-stakes AI systems.

Button:

Copy audit_gates.yaml

agent_prompt.md

Description:

A prompt for an AI governance reviewer agent.

Button:

Copy agent_prompt.md

MVP Behavior

Implement copy-to-clipboard for each export card.

No file download is required for MVP.

Copy Feedback

After clicking a copy button, show:

Copied

The feedback should reset after 2 seconds.

Acceptance Criteria

- Each export button copies formatted text
- Copy feedback works
- If clipboard API fails, no crash occurs
- Export section visually matches the site

15. Feature 11 — Quote Actions

Current Strong Quotes

The page already has strong quotes:

- “Technology is never neutral...”
- “Social Doctrine is not a museum of answers...”
- “Human dignity cannot be earned...”
- “Humanity flourishes through its limitations...”
- “The pursuit of greater profit cannot justify...”
- “What saves humanity is the divine love...”

Add copy actions to the most important quote blocks.

Required Actions

Each quote block should support:

- Copy quote
- Copy governance rule
- Copy section link

Minimum Required Quote Actions

Human Dignity Quote

Quote:

Human dignity cannot be earned, and it does not depend on efficiency, productivity, or algorithms.

Governance rule:

Do not deploy AI systems that rank, exclude, punish, or exploit people based on predicted productivity, efficiency, vulnerability, or social value.

Technology Quote

Quote:

Technology is never neutral; it takes on the characteristics of those who devise and finance it.

Governance rule:

Require disclosure of the values, incentives, funding structures, and deployment context shaping the system.

Work Quote

Quote:

The pursuit of greater profit cannot justify the choices that systematically sacrifice human work.

Governance rule:

Require worker impact review, retraining plan, surveillance limits, and displacement mitigation before automation.

Accountability Quote

If available in quote format, add:

Blame may never be collapsed into “the machine.”

Governance rule:

Require named accountable human owners, audit trails, appeal paths, and incident response protocols.

If the quote is not currently styled as a pull quote, turn it into a pull quote inside Chapter V.

Acceptance Criteria

- Quote buttons work
 - Copy feedback appears
 - Buttons are keyboard accessible
 - Quote styling remains elegant
-

16. Styling Requirements

Preserve

- Current blue field
- Cream typography
- Gold accents
- Ecclesial / archival atmosphere
- Sidebar identity
- Ceremonial pacing

Add

- Operational cards
- Doctrine panels
- Governance gate panels
- Export cards
- Anchor button styling
- Accessible focus states

Avoid

- Startup SaaS dashboard look
- Neon AI aesthetics
- Excessive animations
- Generic Bootstrap styling
- Loud red warning blocks
- Overly modern glassmorphism
- Chatbot-like UI

Design Target

The final experience should feel like:

A cathedral console for judging machines.

17. Technical Requirements

Anchor IDs

Create these stable anchors:

```
#executive-summary  
#reading-modes  
#reader-paths  
#principles  
#doctrine-map  
#apply-doctrine  
#governance-gates  
#red-lines  
#person-test  
#export-doctrine
```

JavaScript

Implement:

- Smooth scrolling if not already present
- Copy-to-clipboard utility
- Copy feedback state
- Safe fallback if clipboard API fails

CSS

Implement responsive layouts:

- Three-card grid for Reading Modes
- Five-card responsive grid for Principles
- Four-column responsive Doctrine Map
- Stacked Governance Gates
- Export card grid
- Mobile single-column behavior

Accessibility

Ensure:

- Buttons use actual `<button>` elements
 - Links use actual `<a>` elements
 - Copy buttons have accessible labels
 - Focus states are visible
 - Contrast remains readable
 - No horizontal scrolling on mobile
 - Reduced motion preferences are respected if animations are used
-

18. QA Checklist

Before marking complete, verify:

- Executive Summary appears after Incipit
- Reading Modes appear and link correctly
- Reader Paths appear and link correctly
- Standalone Five Principles section appears after Index
- Doctrine Map appears after Principles
- Chapters I–V remain intact
- Apply the Doctrine appears after Chapter V
- Governance Gates are present

- Five Red Lines are present
 - Person Test is present
 - Export the Doctrine is present
 - Sidebar navigation includes Doctrine / Apply / Export or equivalent
 - Dropdown navigation includes new sections
 - Copy buttons work
 - No console errors
 - Mobile layout is readable
 - No horizontal overflow
 - Existing visual identity is preserved
 - The final site does not feel like generic AI ethics SaaS
-

19. Definition of Done

This PRD is complete when the live page clearly shows the Hybrid architecture:

Orientation near the top:

Executive Summary

Reading Modes

Reader Paths

Principles

Doctrine Map

Ceremonial spine in the middle:

Introduction

Chapter I

Chapter II

Chapter III

Chapter IV

Chapter V

Application near the end:

Apply the Doctrine

Governance Gates

Five Red Lines

Person Test

Export the Doctrine

Final theological close:

Conclusion

The final site should feel like a solemn encyclical that has gained an operational layer — not like a redesign into a startup product.

Innovative Approach:

The coding agent should think of the site as having two forms at once:

1. The Encyclical

A ceremonial text that gives moral authority.

2. The Instrument

A governance apparatus that lets the doctrine judge AI systems.

The new sections should not compete with the encyclical. They should feel like marginalia, canon tables, study apparatus, and constitutional instruments grown from the text itself.

The final experience should make the user feel:

This doctrine can be read.

This doctrine can be taught.

This doctrine can be applied.

This doctrine can stop a machine.

What I should remember

- Choose the Hybrid spine.
- Keep the chapters uninterrupted.
- Add Doctrine orientation near the TOC.
- Add Apply / Export sections before the Conclusion.
- Preserve the sacred visual atmosphere.
- Make the site operational, not SaaS-like.
