

PRD / Agent Injection Prompt

Magnifica Humanitas — Crest Emblem Rebuild & Antique Foil Texture Fix

Role

You are Claude 4.8 acting as a senior front-end implementation agent, SVG craft specialist, and visual systems engineer.

You are working on the Magnifica Humanitas site.

This is a focused hotfix.

Do not restructure the site.

Do not rewrite content.

Do not add new sections.

Do not change the Hybrid architecture.

Do not touch the governance UX unless required by shared styles.

Your job is to fix the failed cross / wreath emblem on the cover.

1. Current Problem

The current cover emblem has become worse after the last pass.

It currently reads as:

- oversized gray watermark
- flat blob
- unclear cross
- weak wreath
- visually heavy but materially dead
- colliding with the word “Humanitas”
- not gold
- not ceremonial
- not heraldic enough
- not like foil, embroidery, metal, or stamped ink

The problem is not opacity.

Do not solve this by only raising or lowering opacity.

The problem is construction, material, scale, and placement.

2. Desired Outcome

Replace the current gray watermark effect with a **restrained antique-foil crest treatment**.

The emblem should read as:

- antique-gold foil / ink
- ecclesial crest
- ceremonial laurel wreath
- clear central cross
- institutional seal
- printed or foiled onto royal blue parchment
- subordinate to the title
- visible when squinting
- materially credible

It should not read as:

- sticker
 - holographic toy
 - gray watermark
 - fake CSS gloss
 - 2000s gradient badge
 - clip art
 - fantasy-game emblem
 - shiny yellow logo
-

3. Reference Direction

Use the supplied foil-sticker reference only for material logic.

Extract these ideas:

- micro metallic flakes
- directional glint
- edge reflectance
- rough foil surface

- subtle procedural texture
- light catching on uneven metallic material

Do not copy:

- sticker format
- peel animation
- trading-card look
- rainbow holographic colors
- Three.js interaction
- full shader implementation
- bright iridescent spectrum
- glossy sticker surface

Translate the reference into a static, restrained, ecclesial SVG/CSS treatment.

Target:

antique foil stamped into blue paper, not holographic sticker.

4. Hard Requirements

Must Fix

1. The emblem must no longer be gray.
2. The cross must be legible.
3. The wreath must be legible.
4. The emblem must not collide with “Humanitas.”
5. The emblem must feel like antique gold foil or embroidery.
6. The emblem must support the title, not compete with it.
7. The emblem must retain ceremonial authority.
8. The emblem must look better at desktop and mobile sizes.

Must Not Do

- Do not just tweak opacity.
- Do not make it bright yellow.
- Do not use rainbow holographic color.
- Do not use a sticker peel effect.
- Do not use loud animated sparkle.
- Do not make the emblem glossy.
- Do not make the emblem look like a badge from a template.
- Do not cover the main title.
- Do not introduce layout overflow.

5. Preferred Solution

Use a two-layer crest strategy.

Layer A — Background Emboss

A large low-contrast blue-on-blue crest, used only for atmosphere.

Behavior:

- very subtle
- blue-on-blue
- fabric / paper emboss feeling
- no gray
- no strong gold
- behind the title
- should not fight with the typography

Layer B — Foreground Foil Crest

A smaller antique-gold crest placed as a real seal or medallion.

Behavior:

- antique-gold foil / ink
- clear cross and wreath
- smaller than current giant watermark
- placed lower-right or near metadata
- not overlapping “Humanitas”
- reads as an intentional emblem

This split is preferred because the current giant mark is trying to be both atmosphere and insignia. It should not do both.

6. Layout / Placement Fix

The current emblem is too high, too large, and collides with the title.

Move it lower and farther right.

Recommended direction:

```
.hero-crest,
.cover-crest {
  right: -5%;
  bottom: -10%;
  width: clamp(320px, 42vw, 620px);
  transform: none;
}
```

If using two layers:

```
.hero-crest-emboss {
  right: -8%;
  bottom: -14%;
  width: clamp(440px, 56vw, 820px);
  opacity: 0.12;
}

.hero-crest-foil {
  right: 5%;
  bottom: 8%;
  width: clamp(160px, 18vw, 280px);
  opacity: 0.92;
}
```

Important:

- the foil crest should not overlap the word “Humanitas”
- the large emboss may sit behind the text only if it is extremely subtle
- the cross should not land on top of the title
- the title must remain visually dominant

7. Color System

Replace gray with antique-gold and blue-shadowed gold.

Add or refine these tokens:

```
:root {
  --foil-dark: #5f4316;
  --foil-bronze: #8f6a27;
  --foil-mid: #b8933f;
  --foil-light: #d8bd6a;
```

```
--foil-pale: #f1dc91;

--crest-blue-shadow: rgba(8, 18, 34, 0.34);
--crest-paper-shadow: rgba(17, 30, 51, 0.28);
}
```

Bad:

```
rgba(130, 135, 125, .55)
```

Good:

```
rgba(184, 147, 63, .56)
```

Better for subtle gold-on-blue:

```
color: color-mix(in srgb, var(--foil-mid) 72%, var(--royal-blue) 28%);
```

Fallback if `color-mix()` support is a concern:

```
color: rgba(184, 147, 63, 0.58);
```

8. SVG Construction Requirements

If the current crest SVG is editable, separate the emblem into semantic path groups.

Preferred structure:

```
<svg class="hero-crest-foil" aria-hidden="true" viewBox="...">
  <defs>
    <!-- foil filters / masks here -->
  </defs>

  <g class="crest-wreath">...</g>
  <g class="crest-field">...</g>
  <g class="crest-cross">...</g>
  <g class="crest-glinton">...</g>
</svg>
```

If this is not possible, create a new simplified SVG crest.

The crest must include

- outer laurel wreath
- central cross
- optional quatrefoil or shield field
- clear geometry
- strong silhouette
- restrained ornament

The crest should avoid

- unclear overlapping circles
- mushy low-contrast fill
- large gray filled shapes
- generic icon shapes
- excessive complexity
- cartoonish symmetry

The current circles in the center are not enough. The cross must become the main recognized mark.

9. Antique Foil Texture Formula

Create an original restrained foil treatment inspired by the supplied reference.

Use only:

- micro-flakes
- faint directional glint
- edge highlight
- subtle roughness
- metallic ink variation

Do not use rainbow iridescence.

SVG Filter Option

Add a subtle SVG filter:

```
<filter id="antiqueFoil" x="-20%" y="-20%" width="140%" height="140%">
  <feTurbulence
    type="fractalNoise"
```

```

    baseFrequency="0.85"
    numOctaves="2"
    seed="12"
    result="noise"
  />

  <feColorMatrix
    in="noise"
    type="matrix"
    values="
      0 0 0 0 0.72
      0 0 0 0 0.58
      0 0 0 0 0.22
      0 0 0 .12 0"
    result="grain"
  />

  <feComposite
    in="SourceGraphic"
    in2="grain"
    operator="arithmetic"
    k1="0"
    k2="0.94"
    k3="0.14"
    k4="0"
    result="foiled"
  />

  <feDropShadow
    dx="0"
    dy="1"
    stdDeviation="0.35"
    flood-color="#f1dc91"
    flood-opacity="0.22"
  />

  <feDropShadow
    dx="0"
    dy="-1"
    stdDeviation="0.45"
    flood-color="#081222"
    flood-opacity="0.32"
  />
</filter>

```

Apply gently:

```
.hero-crest-foil {  
  filter: url(#antiqueFoil);  
}
```

If the filter becomes too noisy, reduce `baseFrequency` or lower alpha from `.12` to `.06`.

10. CSS-Only Foil Option

If SVG filter is not stable, use CSS layering.

```
.hero-crest-foil {  
  color: rgba(184, 147, 63, 0.84);  
  filter:  
    drop-shadow(0 1px 0 rgba(241, 220, 145, 0.22))  
    drop-shadow(0 -1px 0 rgba(8, 18, 34, 0.34));  
}  
  
.hero-crest-foil::after {  
  content: "";  
  position: absolute;  
  inset: 0;  
  pointer-events: none;  
  opacity: 0.18;  
  mix-blend-mode: overlay;  
  background:  
    repeating-linear-gradient(  
      115deg,  
      rgba(241, 220, 145, 0.16) 0,  
      rgba(241, 220, 145, 0.16) 1px,  
      transparent 1px,  
      transparent 5px  
    );  
  mask: inherit;  
}
```

Only use this if masking works cleanly.

If not, use SVG filter.

11. Path-Level Styling

If paths can be separated, use:

```
.hero-crest-foil .crest-wreath {  
  fill: none;  
  stroke: rgba(216, 189, 106, 0.72);  
  stroke-width: 1.4;  
  stroke-linecap: round;  
  stroke-linejoin: round;  
}  
  
.hero-crest-foil .crest-cross {  
  fill: rgba(184, 147, 63, 0.78);  
  stroke: rgba(95, 67, 22, 0.44);  
  stroke-width: 0.8;  
}  
  
.hero-crest-foil .crest-field {  
  fill: rgba(184, 147, 63, 0.10);  
  stroke: rgba(216, 189, 106, 0.32);  
  stroke-width: 0.8;  
}  
  
.hero-crest-foil .crest-glint {  
  fill: none;  
  stroke: rgba(241, 220, 145, 0.42);  
  stroke-width: 0.5;  
  opacity: 0.75;  
}
```

The cross should carry the strongest fill.

The wreath should carry the strongest linework.

The field should remain quiet.

12. No-Holographic Rule

The reference article uses iridescence.

For this site, do not use rainbow iridescence.

Allowed palette:

- dark bronze
- antique gold
- pale gold
- blue-shadowed gold
- parchment highlight

Forbidden palette:

- purple
- green
- cyan
- pink
- rainbow spectrum
- chrome holographic foil

If any color shift is used, it must stay inside the antique gold family.

13. Mobile Behavior

On mobile:

- crest must not obscure the title
- crest may become smaller or move lower
- large emboss layer may be hidden
- foreground foil crest may remain if it fits
- no horizontal overflow

Suggested:

```
@media (max-width: 720px) {  
  .hero-crest-emboss {  
    opacity: 0.08;  
    width: 82vw;  
    right: -28vw;  
    bottom: -8vw;  
  }  
  
  .hero-crest-foil {  
    width: 34vw;  
    right: 6vw;  
    bottom: 9vw;  
  }  
}
```

If mobile becomes crowded, hide the foreground foil crest and keep only a subtle emboss.

14. Side Frame / Ornament Coordination

The cover frame already has gold ornament. Make sure the crest coordinates with it.

The crest gold should not be a different yellow from the frame.

Use shared tokens:

```
--foil-mid  
--foil-light  
--gold-ink  
--gold-hairline
```

If the frame still looks stronger than the crest, improve crest linework.

If the crest overpowers the frame, reduce crest opacity or scale.

15. Acceptance Criteria

The fix is successful when:

- the emblem no longer looks gray
 - the cross is legible
 - the wreath is legible
 - the title remains dominant
 - the crest does not collide with “Humanitas”
 - the crest feels antique gold / foil / embroidery
 - it does not look like a sticker
 - it does not use rainbow holographic effects
 - it does not look like fake yellow plastic
 - the large background mark, if kept, feels like embossing
 - the smaller crest, if added, feels like a seal
 - mobile layout remains clean
 - no console errors
 - no broken SVG assets
 - no structural changes
-

16. Taste Gate Before Final

Before reporting completion, answer these internally:

1. If I squint, can I read the cross?

If no, simplify or strengthen the cross.

2. Does the emblem still look gray?

If yes, replace gray with antique gold / blue-gold.

3. Does it overlap the title?

If yes, move it lower/right or reduce scale.

4. Does it look like a sticker?

If yes, remove glossy / playful effects.

5. Does it feel like foil or embroidery?

If no, add edge glint, grain, and line hierarchy.

6. Would this belong on the Cape Art Direction System board?

If no, revise.

17. Implementation Sequence

1. Inspect current crest markup and SVG assets.
2. Identify whether `opener-crest.svg` or inline SVG controls the cover emblem.
3. Duplicate or back up the current crest treatment.
4. Remove gray fill treatment.
5. Decide between:
 6. two-layer emboss + foil crest, or
 7. one rebuilt foil crest.
8. Separate SVG groups if possible:

9. wreath
 10. cross
 11. field
 12. glint
 13. Add antique foil tokens.
 14. Add original foil texture filter.
 15. Reposition emblem so it does not collide with title.
 16. Test desktop.
 17. Test mobile.
 18. Verify no layout overflow.
 19. Verify no console errors.
 20. Report exact files changed.
-

18. Likely Files Changed

Likely:

- `index.html`
- `assets/styles.css`
- `opener-crest.svg` or equivalent crest asset

Do not touch:

- content structure
 - `script.js` unless required
 - governance sections
 - copy text
-

19. Final Report Format

When done, report:

```
## Completed

- Rebuilt cover emblem treatment
- Replaced gray watermark with antique foil crest
- Repositioned crest away from title
- Added subtle foil grain / edge glint
- Verified desktop and mobile

## Files Changed
```

- path
- path

QA

- Desktop
- Mobile
- No overflow
- No console errors
- Title hierarchy preserved

Notes

- Any taste-tunable values
- Whether two-layer or one-layer crest approach was used

Final Instruction

Do not make another opacity tweak.

Rebuild the crest as a material object.

The emblem should feel like an ecclesial seal foiled into royal blue paper — not a gray watermark behind a title.
